

Step Up to the Gen AI Ecosystem

Full syllabus

Format: Live, 10 sessions x 1.5 hours = 15 hours

Cadence: A new batch starts every 30 days

Seats: 25 maximum

Level: Low on jargon - no coding background required

Price: Rs. 14,999 (list Rs. 30,000)

This batch is for professionals who need real command of generative AI without a computer science background: people who have to decide what to build, judge whether it works, and answer for it afterwards. Light on maths, heavy on judgement and hands-on practice. You bring a real problem from your work and build against it throughout.

Who this is for

- Managers and leads who have to scope AI work and review its output.
- Analysts, writers, operations and product people who want to build their own workflows.
- Anyone who can use ChatGPT or Claude but cannot yet tell when it is quietly wrong.

Session by session

Session 1 - What a generative model actually does

A working mental model of prediction, context and sampling, without the maths. Why the same prompt gives different answers, and why that is not a bug.

Session 2 - The landscape, honestly

Which models exist, what they cost, where each is genuinely better. How to choose without chasing leaderboards.

Session 3 - Prompting that survives contact with reality

Moving from a prompt that worked once to one that holds across a hundred inputs. Structure, examples, constraints, and how to test.

Session 4 - Getting structured output

Making a model return data your spreadsheet or system can consume - and validating it before you trust it.

Session 5 - Your own documents: retrieval, conceptually

What RAG is, what it fixes, what it does not. Enough to scope the work and judge whether a vendor's version is any good.

Session 6 - Agents and automation

What 'agent' means once you strip the marketing. Where automation pays off and where it quietly costs you more than it saves.

Session 7 - A gentle first API call

Enough hands-on to understand what your engineers are doing. Copy-paste friendly; no prior coding assumed.

Session 8 - Quality, hallucination and guardrails

How to test AI output the way you would review a new hire's work, and how to make that review scale.

Session 9 - Cost, privacy, security and governance

What leaves your building, what it costs at volume, and the policy questions to settle before you roll anything out.

Session 10 - Capstone: ship one workflow

You present the AI-assisted workflow you built during the batch and get live critique from the room and the instructor.

The capstone

From session three onwards you work on one real workflow from your own job - a report you produce, a queue you triage, a document set you search. Each session adds a piece. In session ten you demonstrate it working and explain where you would not trust it. That last part is the point.

Gen AI Live - live, small-group generative AI training. Sessions run on Google Meet or Zoom; booking, intake and material live at the website. Questions: hello@genailive.in
